SRS

East Loddon Merino Stud is a family business run by Tom and Marcus Hooke, based midway between Deniliquin and Hay, NSW.

We breed SRS merino sheep focusing on bold crimping, soft white wool, high growth rate, muscle and fat on wrinkle free sheep.

HOW WE DO IT

- Over 15 years of SRS selection
- Strict Visual Selection
- Performance recording under commercial conditions
- MERINOSELECT ASBV's
- Genomic Testing
- Extensive AI and ET programs

**MERINOSSELECT
ASBV**

USING AND UNDERSTANDING ASBV's

ASBV's are a tool to better predict an animals genetic merit for particular traits. They are generated from on farm performance data, pedigree information and genomic information. We take a lot of care ensuring the data behind our ASBV's is as accurate as possible, giving the best genetic prediction possible.

YWT – Yearling Weight

Estimates the genetic difference in animals for growth rate to certain ages. PWT refers to growth to 7 months of age and YWT refers to growth to 12 months of age.

YFAT – Yearling Fat

Estimates the genetic difference in an animals ability to lay down fat at 12 months of age

YEVD – Yearling Eye Muscle Depth

Estimates muscle depth at 12 months of age

Higher levels of YFAT and YEVD have been correlated with better reproduction rates in tougher times.

YCFW – Yearling Clean Fleece Weight

Estimates the genetic difference in fleece cut at 12 months of age, expressed as a percentage.

YSL – Yearling Staple Length

Estimates staple length at 12 months of age. An important trait when aiming to increase fleece weight without excess skin wrinkle and the need for mulesing.

YFD – Yearling Fibre Diameter

Estimates the genetic difference in animals for micron at 12 months of age.

While we have included raw fleece measurements, we strongly encourage buyers to utilise this ASBV to assist them in more accurately selecting a micron range without the impact of season and animal age.

Ask for help – we can help you understand this figure (and any of the others) to ensure you are selecting the rams that best meet your breeding objective. We can also review previous ram purchases to assist you to find the right selection range.

YFDCV – Yearling Fibre Diameter Coefficient of Variation

Estimates the CV of micron at 12 months of age. An important wool quality trait. The lower the CV the more uniform the wool fibres are in micron. A low CV is favoured by processors and also reduces the likelihood of fleece rot and in turn flystrike.

BBWR – Early Breech Wrinkle

Estimates the genetic difference in animals for breech wrinkle, measured off shears at weaning age. Another important trait when looking to cease mulesing

WR – Weaning Rate

Estimates reproductive performance. This trait combines data from conception rate, litter size and lamb survival

Health

Brucellosis: Accredited free flock.
Cert No. OB 13/16.

Ovine Johnes disease: Gudair vaccinated at marking.

Vaccinations: 6 in 1 at lambmarking and weaning.

SELECTION PRINCIPLES

At East Loddon we take a balanced approach in our classing of animals. We undertake a strict visual appraisal along with benchmarked objective measurement, in the form of Australian Sheep Breeding Values (ASBVs).

At classing each animal is visually assessed on body structure, fibre quality & quantity and skin type (no wrinkle, thin and loose).

ASBVs are a fantastic tool for evaluating a number of other traits that are difficult to pick up just by eye.

We take a lot of care ensuring the data we collect is best practice thus generating highly reliable breeding values for the most informed breeding decisions for us and our clients.
